

## **Digital Horizon Solutions (DHS) announces EasyLobby integration**

Dallas, TX – April 16, 2007 – Digital Horizon Solutions and Easy Lobby Inc today announced that they have partnered to provide integrated access control and visitor management capabilities. The product integration combines EasyLobby's SVM™ 9.0 Visitor Management software with DHS's Eclipse™ 700 software.

The solutions integrates visitor management and provides the highest level of security management by enabling customers to easily grant card access to those visitors who require it, and not allowing unauthorized users. Customers using this system can control visitor and employee access, track visitor locations, and determine the duration for which a visitor badge/card is valid.

This unique system not only provides the guard or receptionist ease of use when registering visitors, it also has an optional self administration tool for the visitors which gives our customer the capability of customizing the software to their building needs. This software meets the needs of small to large corporations, and has been well received through out the industry. The simplicity of EasyLobby's powerful visitor management software made it a perfect match with Eclipse 700 software and a welcomed addition to our Eclipse family of products.

"We are always searching for the best of breed in every area to integrate with Eclipse to ensure we are exceeding our customer's expectations. We are very excited to introduce the EasyLobby system and believe it provides significant value to our end user customers and integration partners" states John Carter, President of Digital Horizon Solutions.

"The integration of our SVM software with Eclipse provides joint customers with a very high level of control over visitor and contractor access" said Howard Marson, CEO of EasyLobby. "Customers can now have the best of both worlds for visitor management and access control, without sacrificing any functionality."

Headquartered in Dallas Texas, Digital Horizon Solutions (DHS) is a wholly owned subsidiary of [Keri Systems Inc.](#), one of North America's largest and best known independent providers of access control and integrated security systems. With over 30 years industry experience, the DHS team has developed Enterprise solutions for airports, military installations, government facilities, universities, hospitals and fortune 500 companies around the globe, as well as many standard commercial applications.
