

Galaxy Control Systems and EasyLobby®, Inc. Announce Fully Integrated Access Control/Visitor Management Solution and Reseller Agreement

Companies integrate their industry-leading products to provide customers with unprecedented control over managing visitors and contractors who require card access

Walkersville MD and Needham MA, July 24, 2006 - Galaxy Control Systems, a leading provider of access control systems, and EasyLobby, the industry leader in secure visitor management solutions, today announced the availability of an add-on software module that tightly integrates System Galaxy and EasyLobby's SVM (Secure Visitor Management) software. As part of the announcement, Galaxy has also become an authorized dealer for the full line of EasyLobby visitor management products, and will be offering the integrated solution to all of its dealers and customers.

With the new integration module, customers using SVM and System Galaxy will be able to issue different levels of card access to visitors, contractors and employees directly from the EasyLobby SVM visitor form. At the time visitors or contractors are checked in or badged using SVM, information about them, the employee being visited, access level to be granted, card number, and expiration date/time is automatically passed from the SVM database to the System Galaxy database, and the card is activated. In addition, when the person is checked out of EasyLobby, System Galaxy is immediately notified and the card is deactivated. Cards do not need to be pre-programmed, and they can be re-used.

"More and more of our customers are requesting this type of integration between our award-winning visitor management system and their access control system," said Howard Marson, CEO of EasyLobby. "The tight integration with System Galaxy allows our joint customers to quickly and easily grant card access to those visitors that require it, without having to expose the access control system to their guards or receptionists."

"Galaxy has experienced a tremendous increase in requests for visitor registration," states Rick Fournier, CEO of Galaxy Control Systems. "Access control alone cannot satisfy the needs of today's sophisticated end-user. With the integration of the SVM product, our system now satisfies those requirements to enhance the safety of visitors and employees in one streamlined, non-threatening solution."

Pricing and Availability

The EasyLobby-Galaxy integration module, plus EasyLobby's full suite of visitor management and web pre-registration software, and a broad array of value-added peripherals (passport/license/business scanners and readers, badge printers, cameras, signature pads, barcode scanners, card readers, etc.) are available immediately from both Galaxy and EasyLobby, or any of

their respective dealers worldwide.

About Galaxy Control Systems

Galaxy Control Systems is an independently owned American manufacturer of integrated access control. Since 1984, Galaxy products have secured locations all over the world. All Galaxy Control Systems solutions are distributed exclusively by carefully selected, independent access control dealers, who have the expertise to create and support complex security solutions.

Galaxy's access control solutions range from small applications to fully integrated access control systems. Galaxy systems can interface to all reader technologies, including smart readers and biometrics. Galaxy's products provide control of doors, alarm monitoring, badging, attendance, elevators, CCTV cameras, digital video storage, and more.
